The Cloud is a technology tool, business strategy and an unrivaled value creator for the modern age.

How do you Cloud?

Emboldened by our Cloud Security superpower, we help organizations migrate, adopt and operationalize cloud services.

Advisory Engagement Services

Cloud Kickstart (Phase 1)

Initiate and create your path forward by establishing your cloud vision, strategies and priorities which are guided and aligned to the Business. Feel confident in your cloud trajectory by making the right decisions on cloud provider, platform mix (private, hybrid, public, cloud native), migration approach, security, culture, resourcing, budget, and more.

Cloud Secure (Phase 2)

Protecting your Cloud is significant and a strategic priority. Devise clear, documented Cloud Security directives, policies and key performance indicators (KPIs). As you build and implement your Cloud, do so with enterprise-class cloud security guidelines, frameworks and best practices. The best cloud providers, like AWS, have excellent documentation available.

Cloud Go (Phase 3)

As you move your applications, services and workloads to the cloud you will experience the ease, flexibility and power the cloud brings to your business. But, this is also a time where many organizations make costly missteps in regards to their cloud modernization, cloud migration and adoption strategies, processes and procedures. It may be helpful to consider the 6 R's (from AWS) Re-host, Re-platform, Re-factor/Re-architect, Re-purchase, Retire and Retain. Take the time to create the right plan for your organization. Remember, migrating the right way will set your organization up for success and allow ever increasing repeatability, predictability and time-to-value.

Make Cloud Better (Phase 4)

Optimize, optimize, optimize. Once your Cloud is up and running, it is important to consistently measure and monitor performance, capacity and costs so that you can run better. Leveraging your cloud platform management tools, execute comprehensive workload reviews to understand consistency with your original plan, and what changes are needed to accommodate the day-to-day realities. Also, look for resource waste and adjust immediately. Most importantly, analyze your reporting to balance performance to capacity to costs. Based upon real information, investigate pricing programs and look for ways to make your budget go further.

We are a proud AWS Partner

Practice Overview

The Cloud is a technology tool, business strategy and an unrivaled value creator for the modern age. As such, the Cloud can feel a bit overwhelming, making the most savvy business leaders and technology executives unsure of where to begin, or if their path forward is the best one.

Aligned is a Cloud-focused advisor and services organization with deep experience in Cloud Security, and a keen ability to educate and guide our clients through all things cloud. We begin by understanding your Organization. Where are you today? What is your vision of the future? And, what are the key drivers, goals and resources propelling you forward? With these insights, we can begin to develop the direction and strategies to leverage the cloud with clarity and intention. We can help you plan, prioritize, budget, initiate and manage your cloud journey.

We are experts in Cloud, driven to earn your long-term trust. We are here to serve as guide and mentor for the business and application of your cloud. Check out our Advisory Engagement Services which have been specifically designed to help you through each phase of the cloud journey.
