Information Security
RISK ANALYSIS

....

Perform a high-level evaluation of your security program relying on industry frameworks to identify gaps and measure security and compliance risk.

SOLUTION
BRIEF

About our
Cloud Security Practice

....

Security, Privacy & Compliance for the Enterprise Cloud

....

What we do
Evaluate your traditional on-premises or cloud security program and recommend pragmatic and cost effective administrative and technical safeguards including processes and/or technology specifically designed, and purpose built to mitigate your organization 's security and compliance risk.

What you get
A comprehensive understanding of your potential security and compliance risk and how to prioritize administrative and technical security safeguards necessary to mitigate risk to an acceptable level.

Insight into how to optimize and rationalize your existing security architecture and solutions to influence and control costs while improving or sustaining your security posture.

What it costs
This high-quality assessment is complimentary and costs you nothing but your time.

Already did a formal risk assessment?
Great! Let us help you make sense of the risk and recommendations to pragmatically and cost effectively prioritize work.

Deliverable
Brief and concise narrative that reflects the results of the analysis along with recommendations.

Securing the Cloud is a challenge for organizations regardless of where they are within their cloud journey. The ease, power and flexibility of cloud solutions and services unfortunately contribute to a security strategy and architecture that is often limited, and simply not well-architected. But establishing and maintaining enterprise-class protection for your cloud is achievable. Cloud providers, like AWS, provide guidelines, frameworks and best practices as a foundation for cloud security but it is vital to implement the right mix to programmatically fit security into your business.

At Aligned, Security is in our soul. Our team has years of hands-on, operational experience in both the public and private sector developing and implementing world-class cybersecurity strategies and operationalizing the processes, methods and solutions to bring this protection into reality. In fact, our superpower is Cloud Security for infrastructure, applications and services. Aligned's security experts will help you implement, adopt and operationalize the cloud strategies, frameworks and best practices that are right for your environment and business requirements.

Ultimately we guide you to securely deliver cloud infrastructure, applications and services to meet your security, privacy and compliance objectives and requirements.
